

NINGARAJ R. UKKALI

FULL-STACK DEVELOPER

+91 7019373549 | ningarajukkali@gmail.com | github.com/developerraj19-sudo | linkedin.com/in/ningaraj-ukkali

PROFESSIONAL SUMMARY

Passionate Full-Stack Developer with hands-on experience architecting, building, and deploying scalable web applications using modern backend and frontend technologies. Quick to adapt, eager to tackle complex technical challenges, and committed to continuous professional growth. Proficient in Python (FastAPI/Flask), PHP, React.js, secure REST APIs, real-time WebSockets, and modern database architectures. Seeking an opportunity to contribute, learn from experienced professionals, and build a successful engineering career.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, JavaScript, PHP, HTML5, CSS3
- **Frontend:** React.js, Tailwind CSS, Responsive UI Design
- **Backend & APIs:** PHP, REST APIs, FastAPI, Flask, WebSockets
- **Databases:** MySQL, PostgreSQL, MongoDB, Redis, Supabase
- **AI & LLM Technologies:** Google Gemini, OpenAI GPT-4o, Gemini Vision API, LangGraph
- **Tools & Platforms:** Git, GitHub, Docker, AWS, VS Code, Linux

WORK EXPERIENCE

Freelance Full-Stack Web Developer | Self-Employed (2025 – 2026)

- Developed and delivered production-ready full-stack web applications for multiple clients within strict deadlines.
- Managed the complete software development lifecycle (SDLC), from initial requirement analysis and architectural design to final deployment.
- Engineered scalable RESTful API endpoints and integrated backend services with PostgreSQL and MongoDB databases.
- Built responsive, accessible frontend interfaces in React.js and Tailwind CSS with robust client-side state management.

PROJECTS

CraftCycle – AI-Powered Circular Economy Marketplace

- Built an end-to-end marketplace for scrap materials and upcycled products using Python (Flask), PostgreSQL, and React.
- Integrated Google Gemini Vision AI to analyze uploaded scrap material images and suggest high-value upcycling ideas.
- Implemented secure JWT authentication, a custom reward/loyalty system, and high-performance REST APIs.

Tech Stack: Python (Flask), React.js, PostgreSQL, Supabase, Gemini AI, Gemini Vision, HTML, CSS, JavaScript.

PulseSim – AI Medical Patient Simulator

- Developed an AI-powered medical training simulator using FastAPI and LangGraph to emulate real-world clinical interactions.
- Engineered real-time patient vitals streaming with WebSockets, Redis messaging, and Neo4j graph relationships.
- Persisted comprehensive simulation logs and session analytics in PostgreSQL for automated trainee assessment.

Tech Stack: FastAPI, LangGraph, OpenAI GPT-4o, Neo4j, Redis, PostgreSQL, WebSockets, Docker.

CERTIFICATES

- Generative AI Certification

EDUCATION

Bachelor of Computer Applications (BCA) (2023 – 2026)

Mangalore University | CGPA: 8.1
